

Matrix Removal System FX1000e and MX-12e

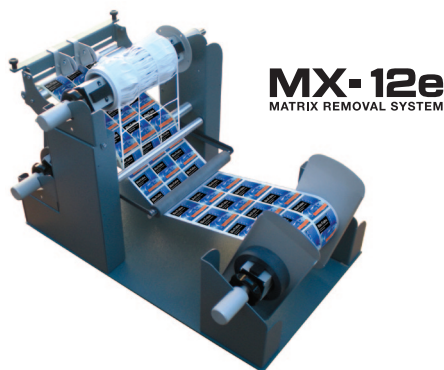

Perfect Accessories for the CX-Series

CX1000e and CX1200e makes it so fast and easy to produce your own labels in-house that you'll wonder how you ever got along without it. No longer do you need to order massive quantities of pre-printed labels. There's no lead time and no set-up charges, either.

FX1000e professional Matrix Removal & Slitting System

Primera's FX1000e is a heavy duty machine which allows matrix removal and slitting with up to 7 knives, without hassle. Easy, front load mandrels and a strong roller system, combined with powerful motors, guarantees a perfect finish. A second optional mandrel allows wind-up in both directions. The operator board has individual torque controls for each wind-up mandrel as well as a master control to regulate the speed. The machine detects web breaks or end of roll and stops automatic. The FX1000e can be also used for simple rewinding jobs. Optional accessories like label counter, marking print and others are under development which makes the FX1000e a long term investment.

MX-12e alternative low-budget solution

The MX-12e is the ideal solution for small and medium sized jobs and solely designed to remove the matrix and slit the web. One master control operates the two take up mandrels for matrix and web and must be always used with same diameter rolls. The inner motorized mandrels can be easily removed for loading. The MX-12e comes with three slitter knives and can be upgraded with up to 6 knives.

	FX1000e	MX-12e
Max. Roll diameter	305mm (12")	229mm (9")
